A PAPERMAKING DEVICE FOR PRODUCING A MULTILAYER LINER AND ASSOCIATED METHODS

ABSTRACT OF THE DISCLOSURE

A method for the production of a liner comprising at least a top layer and a base layer is provided, wherein a forming section with at least two forming units is used to create a fiber web, said fiber web being conveyed through a press section and further to a drying section, said press section comprising a number of roll nips and at least one impermeable transfer belt with at least one smooth surface, wherein said transfer belt runs through the last nip in the press section in such a manner that its top layer is pressed against said smooth surface of the transfer belt.
